

## Company CMS

---

### Details

- The excel sheet contains the roles, permissions of the users in as much details as I could.

To explain it in short, Every user gets a personalised dashboard and can edit anything in the that section to which they belong but the changes will not be live without the CEO/head's approval of the said changes.

So for Eg:- A marketer will see the Company, Marketing and Team options in the dashboard and can View and edit these. But any edit in the Marketing section should be approved by CEO/CMO to become live changes.

The same applies to all categories.

- The Company CMS folder is filled with all the files and documents required for the CMS. The sidebar options in the index page located Company CMS > index.html is the one for the CEO with all the details available.
- The dashboard for everyone else will be personalised in what they can see. This is highlighted and you can see it by checking the overview or any file in the folder of the section.  
So for eg:- Someone in Marketing field with the respective permissions, will be able to see the dashboard as seen in Company CMS > Marketing > overview.html. Here the head will have different permissions and interns/marketers will have diff as highlighted in the excel sheet.
- I have completed almost the full front end for the panel. The css files might be a little confusing, so try to include the ones in each file as already seen. That'll keep it well.
- Each user will have their own "user-profile" as well.
- This is the basic layout highlighting all the important details. The exact wordings will be changed once the panel is ready as that is not as imp as of now.
- Let me know if you need anything else.
